PRODUCT FEATURES

- Modüler sap tasarımı
- top edge of shank = centre height set
- screws in shank for correcting alignment
- hardened pin
- exact positioning of the marking on the circumference of the workpiece
- marking up to a shoulder
- center height corresponds to the first marking point
- marking position individually adjustable
- sets in high quality packaging

Product features

- Fixed tool head
- New entry-level model for simple burnishing applications, e.g. for burnishing shafts with cylindrical surfaces
- Tool universally applicable
- Compact design - developed for Swiss type lathes
- Center height at middle of the shank
- Long tool life of the diamond burnishing tip due to eightfold change of tip position

Recommendations

- Burnishing speed up to 200 m/min
- Feed rate up to 0.2 mm/U
- Material allowance of 0.01 mm (~Rz 10) and 0.02 mm (~Rz 20)
- For an optimum result it is recommended to use a cooling lubricant

The zeus burnishing tool integrates the burnishing of a component into the machining process on a machine.

EXTREMELY COST EFFICIENT

It can perform subsequent machining steps such as grinding, polishing, superfinishing, honing or hardening.

Product features

- Tool head is variably adjustable
- Tool universally applicable
- Swivel range $\pm 90^\circ$
- Thanks to the adjustability of the tool head, it is possible to burnish end face, conical, convex and concave geometries
- Application up to a shoulder
- Long tool life of the diamond burnishing tip due to eightfold change of tip position

Recommendations

- Burnishing speed up to 200 m/min
- Feed rate up to 0.2 mm/U
- Material allowance 0.01 mm ($\sim R_z 10$) and 0.02 mm ($\sim R_z 20$)
- For an optimum result it is recommended to use a cooling lubricant

RRA

RRE

zeus burnishing rolls can be used in standard zeus form knurling tools. On request, we can develop and produce a custom holding system.

Use in this tool system is suitable for machining cylindrical work-pieces, bores, end faces, conical workpieces and for convex and concave outer contours.

Applications:

zeus burnishing rolls are used primarily for roller-burnishing and supporting round material during machining on lathes.

Result:

Improved surface quality
Increased dimensional stability
Increased hardness of surfaces

Advantages:

- Burnished workpieces exhibit low friction and increased resistance to corrosion after machining
- Reworking, such as grinding, honing and lapping can be replaced by simple roller-burnishing machining
- When used as support rolls, they reduce wear on the bearings and clamping devices and minimise the pressure on the workpiece
